

Article 1: The practice of organizational research in the field

The research practice of organizational research in the field is a complex and dynamic process. It involves the interaction of various factors, including the researcher's background, the research topic, the field setting, and the relationships between the researcher and the participants. This article explores the practice of organizational research in the field, focusing on the challenges and opportunities that arise from this type of research. It discusses the importance of reflexivity, the role of the researcher as a participant-observer, and the need for ethical considerations. The article also examines the different methods used in field research, such as interviews, observations, and document analysis, and how these methods are shaped by the research context. Finally, it discusses the importance of writing and reporting on field research, and how this process can be used to reflect on and improve the research practice.

Article 2: Institutional work and organizational change

Institutional work is a form of organizational work that involves the creation, maintenance, and transformation of institutional arrangements. It is a process that is shaped by the power and interests of different actors within an organization. This article explores the practice of institutional work, focusing on the challenges and opportunities that arise from this type of work. It discusses the importance of understanding the institutional context, the role of the actor as an institutional entrepreneur, and the need for strategic action. The article also examines the different methods used in studying institutional work, such as case studies, interviews, and document analysis, and how these methods are shaped by the research context. Finally, it discusses the importance of writing and reporting on institutional work, and how this process can be used to reflect on and improve the work practice.

Organizational change is a process that involves the transformation of an organization's structure, culture, and processes. It is a process that is shaped by the power and interests of different actors within an organization. This article explores the practice of organizational change, focusing on the challenges and opportunities that arise from this type of work. It discusses the importance of understanding the organizational context, the role of the actor as a change agent, and the need for strategic action. The article also examines the different methods used in studying organizational change, such as case studies, interviews, and document analysis, and how these methods are shaped by the research context. Finally, it discusses the importance of writing and reporting on organizational change, and how this process can be used to reflect on and improve the change practice.

Organizational change is a process that involves the transformation of an organization's structure, culture, and processes. It is a process that is shaped by the power and interests of different actors within an organization. This article explores the practice of organizational change, focusing on the challenges and opportunities that arise from this type of work. It discusses the importance of understanding the organizational context, the role of the actor as a change agent, and the need for strategic action.
