

Il risultato è che, se si accetta l'idea che la conoscenza è un tipo di relazione tra un soggetto e un oggetto, allora si può dire che la conoscenza è un tipo di relazione tra un soggetto e un oggetto. In altre parole, la conoscenza è un tipo di relazione tra un soggetto e un oggetto. In altre parole, la conoscenza è un tipo di relazione tra un soggetto e un oggetto.

$$\text{Average } \mu = \frac{1}{N} \sum_{i=1}^N \mu_i \quad \text{for } \mu_i \in \mathbb{R}^n \quad \text{for } i = 1, \dots, N$$

$\lim_{n \rightarrow \infty} \frac{1}{n} \sum_{k=0}^{n-1} f(T^k x) = \int_X f d\mu$

Let $\mathbf{r}_1$ and $\mathbf{r}_2$ be the position vectors of the points P_1 and P_2 respectively. Then the vector $\mathbf{r}$ is the position vector of the point P on the line segment P_1P_2 . The vector $\mathbf{r}$ can be expressed as a linear combination of $\mathbf{r}_1$ and $\mathbf{r}_2$.

It is suggested that you should draw a diagram showing the points P_1 , P_2 and P on a line. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}$ can be expressed as a linear combination of $\mathbf{r}_1$ and $\mathbf{r}_2$.

The diagram shows that the vector $\mathbf{r}$ is the sum of the vector $\mathbf{r}_1$ and the vector $\mathbf{r}_2$. The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}$ is the position vector of the point P .

It is suggested that you should draw a diagram showing the points P_1 , P_2 and P on a line. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}$ can be expressed as a linear combination of $\mathbf{r}_1$ and $\mathbf{r}_2$.

$$\mathbf{r} = \frac{1}{2}\mathbf{r}_1 + \frac{1}{2}\mathbf{r}_2$$

It is suggested that you should draw a diagram showing the points P_1 , P_2 and P on a line. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}$ can be expressed as a linear combination of $\mathbf{r}_1$ and $\mathbf{r}_2$.

It is suggested that you should draw a diagram showing the points P_1 , P_2 and P on a line. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}$ can be expressed as a linear combination of $\mathbf{r}_1$ and $\mathbf{r}_2$.

10.1 The Geometry of the Plane

Consider the set of points $P_1, P_2, \dots, P_n$ in the plane. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}_n$ is the position vector of the point P_n .

$$\mathbf{r} = \frac{1}{n}(\mathbf{r}_1 + \mathbf{r}_2 + \dots + \mathbf{r}_n)$$

It is suggested that you should draw a diagram showing the points $P_1, P_2, \dots, P_n$ in the plane. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}_n$ is the position vector of the point P_n .

It is suggested that you should draw a diagram showing the points $P_1, P_2, \dots, P_n$ in the plane. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}_n$ is the position vector of the point P_n .

It is suggested that you should draw a diagram showing the points $P_1, P_2, \dots, P_n$ in the plane. The vector $\mathbf{r}$ is the position vector of the point P . The vector $\mathbf{r}_1$ is the position vector of the point P_1 . The vector $\mathbf{r}_2$ is the position vector of the point P_2 . The vector $\mathbf{r}_n$ is the position vector of the point P_n .
