

1.1 Computational and statistical descriptions

1.1.1 Descriptive statistics and differential statistics

The *descriptive* (or *static*) statistics describes the *quantitative* (or *numerical*) data, whereas the *differential* (or *dynamic*) statistics describes the *changes* in the data.

$$\text{Descriptive statistics} = \frac{\sum_{i=1}^n x_i}{n} \quad \text{Differential statistics} = \frac{\sum_{i=1}^n (x_i - \bar{x})}{n}$$

Descriptive statistics describes the data, whereas differential statistics describes the changes in the data. The descriptive statistics is the *static* (or *quantitative*) statistics, whereas the differential statistics is the *dynamic* (or *qualitative*) statistics. The descriptive statistics is the *static* (or *quantitative*) statistics, whereas the differential statistics is the *dynamic* (or *qualitative*) statistics.

The descriptive statistics is the *static* (or *quantitative*) statistics, whereas the differential statistics is the *dynamic* (or *qualitative*) statistics. The descriptive statistics is the *static* (or *quantitative*) statistics, whereas the differential statistics is the *dynamic* (or *qualitative*) statistics.

$$\text{Descriptive statistics} = \frac{\sum_{i=1}^n x_i}{n} \quad \text{Differential statistics} = \frac{\sum_{i=1}^n (x_i - \bar{x})}{n}$$

The descriptive statistics is the *static* (or *quantitative*) statistics, whereas the differential statistics is the *dynamic* (or *qualitative*) statistics. The descriptive statistics is the *static* (or *quantitative*) statistics, whereas the differential statistics is the *dynamic* (or *qualitative*) statistics.

1.1.2 Sampling from a finite population

The *finite* (or *discrete*) population is a *finite* (or *discrete*) population, whereas the *infinite* (or *continuous*) population is a *infinite* (or *continuous*) population. The *finite* (or *discrete*) population is a *finite* (or *discrete*) population, whereas the *infinite* (or *continuous*) population is a *infinite* (or *continuous*) population.

$$\text{Finite population} = \frac{\sum_{i=1}^n x_i}{n} \quad \text{Infinite population} = \frac{\sum_{i=1}^{\infty} x_i}{\infty} \quad \text{Sampling} = \frac{\sum_{i=1}^n x_i}{n}$$

The *finite* (or *discrete*) population is a *finite* (or *discrete*) population, whereas the *infinite* (or *continuous*) population is a *infinite* (or *continuous*) population. The *finite* (or *discrete*) population is a *finite* (or *discrete*) population, whereas the *infinite* (or *continuous*) population is a *infinite* (or *continuous*) population.

$$\text{Finite population} = \frac{\sum_{i=1}^n x_i}{n} \quad \text{Infinite population} = \frac{\sum_{i=1}^{\infty} x_i}{\infty} \quad \text{Sampling} = \frac{\sum_{i=1}^n x_i}{n}$$

The *finite* (or *discrete*) population is a *finite* (or *discrete*) population, whereas the *infinite* (or *continuous*) population is a *infinite* (or *continuous*) population. The *finite* (or *discrete*) population is a *finite* (or *discrete*) population, whereas the *infinite* (or *continuous*) population is a *infinite* (or *continuous*) population.

3.1.1. *Building the map*

The research process involves a series of steps that are often iterative and non-linear. The first step is to identify the research topic and the research question.

Identifying the topic

The first step in the research process is to identify the research topic. This involves a broad search of the literature to identify areas of interest and to identify the research question.

Topic	Topic

The second step in the research process is to identify the research question. This involves a more focused search of the literature to identify specific areas of interest and to identify the research question.

The third step in the research process is to identify the research method. This involves a search of the literature to identify the research method that is most appropriate for the research question.

The fourth step in the research process is to identify the research data. This involves a search of the literature to identify the research data that is most appropriate for the research question.
