

Task 1: The relationship between height and weight

Goal:

Describe the data

We are going to use the `height_weight` dataset, which contains information about the height and weight of 1000 individuals. The dataset is available in the `data` package. We will use the `height_weight` dataset to explore the relationship between height and weight.

Person A		Person B		Person C		Person D	
Age	Weight	Age	Weight	Age	Weight	Age	Weight
